

Language Map for JavaScript

Variable Declaration <i>Is this language strongly typed or dynamically typed? Provide at least three examples (with different data types or keywords) of how variables are declared in this language.</i>	Variable declaration is strongly typed. <code>int myVariable = 12;</code> <code>string myString = "This is a string!";</code> <code>bool isTrue = true;</code>																																
Data Types <i>List all of the data types (and ranges) supported by this language.</i>	<table><tr><td>byte</td><td>0 to 255</td></tr><tr><td>sbyte</td><td>-128 to 127</td></tr><tr><td>short</td><td>-32,768 to 32,767</td></tr><tr><td>ushort</td><td>0 to 65,535</td></tr><tr><td>int</td><td>-2,147,483,648 to 2,147,483,647</td></tr><tr><td>uint</td><td>0 to 4,294,967,295</td></tr><tr><td>long</td><td>-9,223,372,036,854,775,808 to 9,223,372,036,854,775,807</td></tr><tr><td>ulong</td><td>0 to 18,446,744,073,709,551,615</td></tr><tr><td>float</td><td>-3.402823e38 to 3.402823e38</td></tr><tr><td>double</td><td>-1.79769313486232e308 to 1.79769313486232e308</td></tr><tr><td>decimal</td><td>(+ or -)1.0 x 10e-28 to 7.9 x 10e28</td></tr><tr><td>char</td><td>Any valid character, e.g. a,*, \x0058 (hex), or\u0058 (Unicode)</td></tr><tr><td>bool</td><td>True or False</td></tr><tr><td>object</td><td>Base type of all other types.</td></tr><tr><td>String</td><td>A sequence of Unicode characters</td></tr><tr><td>DateTime</td><td>0:00:00am 1/1/01 to 11:59:59pm 12/31/9999</td></tr></table>	byte	0 to 255	sbyte	-128 to 127	short	-32,768 to 32,767	ushort	0 to 65,535	int	-2,147,483,648 to 2,147,483,647	uint	0 to 4,294,967,295	long	-9,223,372,036,854,775,808 to 9,223,372,036,854,775,807	ulong	0 to 18,446,744,073,709,551,615	float	-3.402823e38 to 3.402823e38	double	-1.79769313486232e308 to 1.79769313486232e308	decimal	(+ or -)1.0 x 10e-28 to 7.9 x 10e28	char	Any valid character, e.g. a,*, \x0058 (hex), or\u0058 (Unicode)	bool	True or False	object	Base type of all other types.	String	A sequence of Unicode characters	DateTime	0:00:00am 1/1/01 to 11:59:59pm 12/31/9999
byte	0 to 255																																
sbyte	-128 to 127																																
short	-32,768 to 32,767																																
ushort	0 to 65,535																																
int	-2,147,483,648 to 2,147,483,647																																
uint	0 to 4,294,967,295																																
long	-9,223,372,036,854,775,808 to 9,223,372,036,854,775,807																																
ulong	0 to 18,446,744,073,709,551,615																																
float	-3.402823e38 to 3.402823e38																																
double	-1.79769313486232e308 to 1.79769313486232e308																																
decimal	(+ or -)1.0 x 10e-28 to 7.9 x 10e28																																
char	Any valid character, e.g. a,*, \x0058 (hex), or\u0058 (Unicode)																																
bool	True or False																																
object	Base type of all other types.																																
String	A sequence of Unicode characters																																
DateTime	0:00:00am 1/1/01 to 11:59:59pm 12/31/9999																																

Selection Structures

Provide examples of all selection structures supported by this language (if, if else, etc.) **Don't just list them, show code samples of how each would look in a real program.**

If statement

```
if (number > 5) {  
    Console.WriteLine("Number is greater than 5");  
}
```

If-Else

```
if (number > 5) {  
    Console.WriteLine("Number is greater than 5");  
}  
Else {  
    Console.WriteLine("Number is not greater than 5");  
}
```

Else-If Ladder

```
If (number > 10) {  
    Console.WriteLine("Number is greater than 12");  
}  
Else if (number > 5) {  
    Console.WriteLine("Number is greater than 5 but not 10");  
}  
else {  
    Console.WriteLine("number is 5 or less");  
}
```

Switch Statement

```
switch (dayOfWeek) {  
    Case 1:  
        Console.WriteLine("Sunday");  
        break;
```

Repetition Structures

*Provide examples of all repetition structures supported by this language (loops, etc.) **Don't just list them, show code samples of how each would look in a real program.***

For Loop

```
for (int i = 0; i < 5; i++) {  
    Console.WriteLine("Iteration " + i);  
}
```

While Loop

```
while (i < 5) {  
    Console.WriteLine("Iteration " + i);  
    i++;  
}
```

Do-While Loop

```
do {  
    Console.WriteLine("Iteration " + i);  
    i++;  
} while (i < 5);
```

Foreach Loop

```
foreach (int number in numbers) {  
    Console.WriteLine("Number: " + number);  
}
```

Nested Loops

```
for (int i = 0; i < 3; i++) {  
    for (int j = 0; j < 2; j++) {  
        Console.WriteLine("i = " + i + ", j = " + j);  
    }  
}
```

Arrays

*If this language supports arrays, provide **at least two examples** of creating an array with a primitive or String data types (e.g. float, int, String, etc.) If the language supports declaring arrays in multiple ways, provide an example of way.*

```
int[] numbers = { 1, 2, 3, 4, 5 };
```

```
string[] names = new string[3];  
names[0] = "Sara";  
names[1] = "Jim";  
names[2] = "Matt";
```

Data Structures

If this language provides a standard set of data structures, provide a list of the data structures and their Big-Oh complexity (identify what the complexity represents).

Arrays:

Access: $O(1)$

Search (unsorted): $O(n)$

Search (sorted with binary search): $O(\log n)$

Insertion (at the end): $O(1)$

Insertion (at a specific index): $O(n)$

Deletion (at the end): $O(1)$

Deletion (at a specific index): $O(n)$

Lists (List<T>):

Access by index: $O(1)$

Search: $O(n)$

Insertion (at the end): $O(1)$

Insertion (at a specific index): $O(n)$

Deletion (at the end): $O(1)$

Deletion (at a specific index): $O(n)$

Dictionaries (Dictionary<TKey, TValue>):

Access by key: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Insertion: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Deletion: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Sets (HashSet<T>):

Add: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Remove: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Contains: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Queues (Queue<T>):

Enqueue (add to the end): $O(1)$

Dequeue (remove from the front): $O(1)$

Peek (access the front element): $O(1)$

Stacks (Stack<T>):

Push (add to the top): $O(1)$

Pop (remove from the top): $O(1)$

Peek (access the top element): $O(1)$

Linked Lists (LinkedList<T>):

Access by index: $O(n)$

Search: $O(n)$

Insertion (at the end): $O(1)$

Insertion (at a specific index): $O(1)$ with reference to the location ($O(n)$ for searching)

Deletion (at the end): $O(1)$

Deletion (at a specific index): $O(1)$ with reference to the location ($O(n)$ for searching)

Sorted Sets (SortedSet<T>):

Add: $O(\log n)$

Remove: $O(\log n)$

Contains: $O(\log n)$

Doubly Linked Lists (LinkedList<T>):

Access by index: $O(n)$

Search: $O(n)$

Insertion (at the end): $O(1)$

Insertion (at a specific index): $O(1)$ with reference to the location ($O(n)$ for searching)

Deletion (at the end): $O(1)$

Deletion (at a specific index): $O(1)$ with reference to the location ($O(n)$ for searching)

HashTables (Hashtable, Dictionary, etc.):

Access by key: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Insertion: $O(1)$ on average (can degrade to $O(n)$ in worst case)

Deletion: $O(1)$ on average (can degrade to $O(n)$ in worst case)

<p>Objects</p> <p><i>If this language support object-orientation, provide an example of how you would write a simple object with a default constructor and then how you would instantiate it.</i></p>	<pre>class person { public string Name {get; set; } public int Age { get; set; } public Person() { Name = "Matt"; Age = 26; } public void Display() { Console.WriteLine(\$"Name: {Name}, Age: {Age}"); } } //end class</pre>
<p>Runtime Environment</p> <p><i>What runtime environment does this language compile to? For example, Java compiles to the Java Virtual Machine. Do other languages also compile to this runtime? If so, what these other languages?</i></p>	<p>C# compiles to the Common Language Runtime which is apart of the Microsoft.NET framework. Other languages that us the CLR framework are Visual Basic .NET, and F#</p>
<p>Libraries/Frameworks</p> <p><i>What are the popular libraries or frameworks used by programmers for this language? List at least three (3) and describe what they are used for.</i></p>	<p>.NET Framework – Developing a wide variety of applications, including Windows desktop applications, web applications, cloud-based services, and cross-platform ap</p> <p>ASP.NET Core - Developing web applications and RESTful APIs that can run on Windows, macOS, or Linux. ASP.NET Core is known for its speed, scalability, and support for modern web development patterns.</p> <p>Entity Framework - Simplifying data access and database management in C# applications. Developers use Entity Framework to interact with databases, perform CRUD operations, and work with data using object-oriented paradigms.</p>
<p>Domains</p> <p><i>What industries or domains use this programming language? Provide at least three specific examples of companies that use this language and what they use it for. E.g. Company X uses C# for its line of business applications.</i></p>	<p>Microsoft – Microsoft is the developer of C# and is used in the development of Microsoft's own software products, including the Windows operating system, Office suite, and Azure cloud services. Additionally, C# plays a significant role in Microsoft's development tools and frameworks, such as Visual Studio and .NET.</p> <p>Unity Technologies - C# is a popular choice for game development, particularly in the Unity game engine. C# is used for scripting gameplay, creating game logic and building interactive experiences.</p> <p>Philips Healthcare - C# is employed in the healthcare sector for developing medical software, controlling medical devices, and managing patient data</p>
